Attachments: MOHAP Integration with Tatmeen for ImportPermit.docx; FieldTypes.xlsx; FW: Unregistered Drugs field types and attributes

Dear Mubashir,

- 1) Please find attached API documentation and field lengths provided by MoHAP IT for Import permit system. If we are using the same system for Local Sales permit, then can you please confirm following
 - a. It was communicated that there will be an additional dropdown field in import permit to say that this is "Local Sales Permit", Can you please provide the updated API documentation with that attribute along with the possible values and max length.
 - b. Please provide 2-3 sample Local sales permit which we can use to get data and move ahead with the development.
 - c. For Local sales permit process is different. Local products will only go through 1 level of approval i.e. "Market Release", and for imported products its 3 level approval i.e. "Import Clearance, Custom Release, Market Release".
- 2) For Un-Registered Drugs, data flow is different. Now data is coming from Import Permit system to BrandSync to Tatmeen. Hence, we need to make sure the field values are coming as per agreement (Please find attached).
 - a. Un-Registered drugs are part of drop-2 scope and is scheduled to be delivered as per Drop 2 Timelines.

Regards,
Moied Yousuf

Subject: RE: Dependencies for Tatmeen

[EXTERNAL]

Hi Moied,

API's for registered, unregistered and local sales are the same from import permit system and response should be as per the agreed format, is there a different kind of check in place in Tatmeen for local sales and as part of initial Import permit test this was not confirmed?
